

# Risk Illustrations - Results Screen

Last Modified on 19/08/2022 4:02 pm BST

This article is a continuation of article [Risk Illustrations - Capacity For Loss](#).

The Results screen shows the forecasted return based on the criteria entered and the overall suitability of the illustration plan to meet the objective.

The screenshot displays the 'Risk Illustration' results screen. At the top, a progress bar shows steps: 'Term of Investment', 'Initial Amount', 'Regular Contribution', 'Regular Withdrawal', 'Growth Basis', 'Rebalanced Annually', 'Total Contributions', 'Potential Net Loss', 'Investment Risk Category', 'Objective Risk Category', 'Investment Scenario Pathway', and 'Outcome'. Below this, a summary table provides key figures: Expected Outcome (Mean Gain) of £246,160.88 or 23.08%, Lowest Outcome (Min. Gain) of £153,340.00 or -23.33%, and Highest Outcome (Max. Gain) of £357,146.00 or 78.57%. The 'Results' section features three toggle buttons: 'Result + No Costs', 'Result + Costs', and 'Result + Costs + Inflation'. Two line graphs show 'Forecast based on strategic asset allocation - No costs' and 'Forecast based on investment scenario - No costs', both plotting Value against Years (1-10). A 'Strategic Asset Allocation Comparison' box explains the use of Moody's stochastic engine. A 'What's Shown Here' box provides details on the probability-based forecasts. A 'Toggle between Projection, Probability and Portfolio graphs' callout points to a graph toggle icon. A 'Maximise graph' callout points to a maximise icon. A 'Toggle on Results + no costs, Results + Costs, Result + Inflation, Results + Costs + Inflation' callout points to the toggle buttons.

The tiles summarise the information you have entered on the Illustration

Forecast based on strategic asset allocation - No costs

Forecast based on investment scenario - No costs

What's Shown Here

Strategic Asset Allocation Comparison

Moody's stochastic engine is accessed directly by this application and provides data to populate these graphs, showing:

- Probability-based (stochastic) forecasts for the strategic asset allocation representing the risk category, alongside.
- The forecast is based on the investment proposal, or adviser recommendation.
- Simulation models the full range of viable outcomes.

Forecast Mean Return  
Forecast Max. Return  
Forecast Min. Return  
Net Money In  
Net Money Out  
Withdrawals

Expected Outcome  
£293,818.46 or 46.91%

Lowest Outcome ( 5% Chance)  
£183,027.00 or -8.49%

Highest Outcome ( 5% Chance)  
£426,290.00 or 113.14%
