

Sustainable Drawdown – why is the retirement age 65 and the term 19 years by default?

Last Modified on 20/04/2021 3:21 pm BST

The average retirement age is 65 years and the gender-neutral forecast life expectancy is 84 years. This equals a 19 year term.

These inputs can be changed, for example retiring at 67years, equals a 17-year term.
