

# How reliable is the data collected for the Risk Ratings?

Last Modified on 13/02/2024 3:35 pm GMT

Product Providers supply their data and the Risk Ratings are approved before publication. No qualitative overlay is applied to change the risk profile which is calculated solely based on projections of the underlying asset allocations.

The performance of the Moody's model has proved to be extremely reliable over many market cycles and, in our view, will continue to be the best source of investment forecasts and loss analysis available to firms.
