

# Sustainable Drawdown – why is the retirement age 65 and the term 19 years by default?

Last Modified on 13/02/2024 3:35 pm GMT

The average retirement age is 65 years and the gender-neutral forecast life expectancy is 84 years. This equals a 19 year term.

These inputs can be changed, for example retiring at 67years, equals a 17-year term.
