

Setup - Attitude to Risk Questionnaire

Last Modified on 13/02/2024 3:35 pm GMT

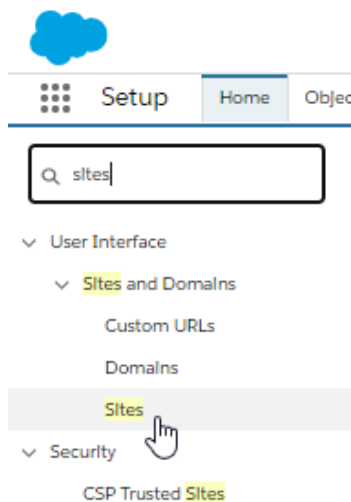

To send Attitude to Risk Questionnaires (ATRQ) direct to your clients to complete, you must set up a unique URL for your system. The URL will be sent in an email to the client and will show in their browser, so you should choose a name that the client would recognise and trust, such as your company name or your name.

This is only setup once, therefore if you opt to move from a trial to a full licence, your URL will remain the same.

Navigate to Setup by clicking on the cog at the top right of the screen and select and Setup.

In the Setup panel on the left, enter 'Sites' in the search box and click on 'Sites':

Sites Help for this Page

What is a Site?

Salesforce sites enables you to create public websites and applications that are directly integrated with your Salesforce.com organization—without requiring users to log in with a username and password. You can publicly expose any information stored in your organization through pages that match the look and feel of your company's brand. Use sites to create public community sites to gather customer feedback, branded login and registration pages for your portals, Web forms for capturing leads, and so on.

Because sites are hosted on Salesforce servers, there are no data integration issues. And because sites are built on native Visualforce pages, data validation on collected information is performed automatically. You can allow users to access your site through your unique Salesforce domain and URL, or you can register your own branded domain or subdomain to redirect to your site.

Create multiple sites that appeal to different audiences and satisfy your company's various business needs. For example, a software company could create one site for new developers, another for customers, and a third for marketing.

Sample sites URLs

To get started, first register your company's Salesforce site domain. Your Salesforce site domain must be unique and must consist of only alphanumeric characters. Salesforce.com recommends using your company's name or a variation of your company's name, such as 'mycompanyportal.'

⚠ You cannot modify your Salesforce site domain name after the registration process.

http:// .force.com

I have read and accepted the Salesforce [Sites Terms of Use](#)

Add your company name to the field below and click 'Check Availability'.

The URL must be unique and cannot be modified once it has been registered.

⚠ You cannot modify your Salesforce site domain name after the registration process.

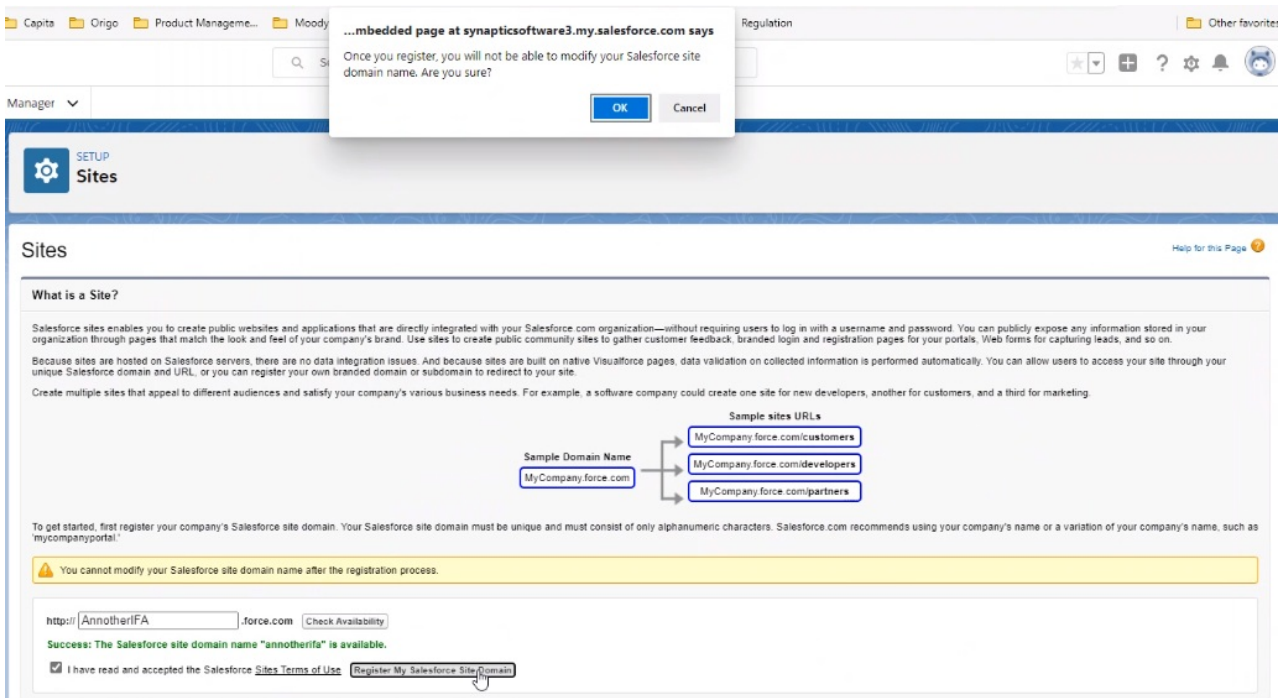

http:// .force.com

I have read and accepted the Salesforce [Sites Terms of Use](#)

You will receive a success message if the URL is available

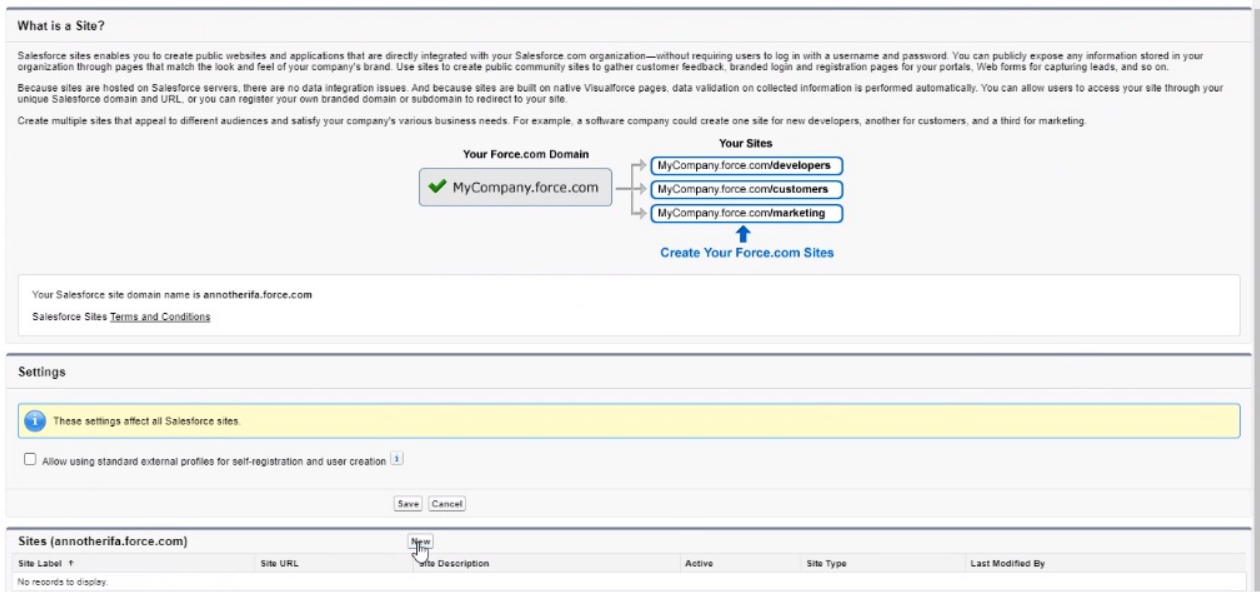

Read and accept Salesforce 'Sites Terms of Use' and click 'Register My Salesforce Site Domain'.

Then 'OK' the message (as stated above, this cannot be modified once registered)

This URL will appear when the client is filling in the ATRQ.

Now the domain name has been created, you will need to setup the site. Click 'New' under the 'Sites (YourCompany)' area:
