If you select PCLS the system will take out the percentage of PCLS specified and remove it from the income calculations.

UFPLS will keep the total plan values invested in the drawdown plan, when income is taken from the drawdown plan 25% of the income withdrawn will be tax free, this will be taken into account when calculating the tax liability.

Phased drawdown allows you to specify the phased period end age, and choose either PCLS or UFPLs for the phased period and remaining term.

For this example, we will select **PCLS**.

You can specify how much PCLS out of the total you would like to remove. The system defaults to the 25% tax-free amount. However, this can be overwritten up or down to suit your clients' needs.

Select whether you would like to use any excess PCLS amount in the calculations.

For e.g. If your client would like to take 15% of their tax free cash, would you like the system to take the remaining 10% into account in the calculations? Select **Yes** if that is the case. If they have already taken some tax-free cash in the past, the client may want 15% but you don't want the 10% to be used in the calculations. Select **No**.

You can add as many plans as you would like to take into the drawdown scenario. The projected total value of all plans is calculated. If you have chosen a PCLS income strategy then you can specify how much PCLS out of the total you would like to remove. The system defaults to the 25% tax-free amount. However, this can be overwritten up or down to suit your clients' needs.

The remaining fund value will be the figure used for the drawdown plan 'initial investment' when calculating if your income profile is achievable for the duration specified.
